PREFACE

Traffic Volumes (September 10 to December 15)

This report lists vehicle traffic volumes obtained by the County of Ventura, Public Works Agency Roads & Transportation Department for various roadway locations within the unincorporated area of Ventura County. The Average Daily Traffic (ADT), the morning peak hour volume, and the evening peak hour volume are listed for each location counted. Traffic counts from the four previous years are also shown. All traffic volume figures listed reflect combined totals for both directions of travel.

Average Daily Traffic (ADT)

Average Daily Traffic in this report is defined as the total traffic counted on an average weekday. The ADT volume is rounded to the nearest one hundred vehicles. A countywide program of regular and systematic traffic count sampling is conducted through the use of permanent count stations using loop detection and mechanical counting devices moved from location to location. The traffic counts are useful for presenting a countywide picture of traffic flow, evaluating traffic trends, computing accident rates, roadway planning, designing highways and other traffic oriented purposes.

Hourly AM/PM Peak Hour Traffic

Hourly AM/PM Peak is defined as the total traffic count during the highest volume hour in the morning/afternoon on an average weekday. The volume is then rounded to the nearest ten vehicles. This data is useful for evaluating highway capacity and other traffic operational studies.
