Air Pollutant Emissions Calculations

SCR-3 Project

Construction Emission Estimate Assumptions/Methods

General Assumptions

- 1) Work occurs 5 days a week, 7 am to 7 pm, excepting major holidays (average 22 days/month).
- 2) For air quality analysis purpose, an accelerated construction schedule for both Reaches 1-3 and Reach 4 were used.
- 3) Construction schedule, equipment needs, material use, provided by VCWPD.

Onroad Equipment Emission Calculations Assumptions

- 1) CARB EMFAC2014 model emission factors for Ventura County are used to estimate on-road emissions. All passenger vehicles are assumed to be gasoline-fueled and all delivery and heavy heavy duty trucks are assumed to be diesel-fueled. Emission factor for each of three classes is weight-averaged emission factor based on the total miles traveled by each EMFAC 2011 vehicle class and total emissions.
- 2) Trip estimates are based on raw material import/export trips, equipment delivery, and worker trips provided by VCWPD.
- 3) Trip distance assumptions: 20 miles/round trip for imported/exported fill trucks, concrete trucks, green waste trucks, and fuel trucks; 30 miles/round trip for construction worker vehicles, crew trucks, and water trucks; 40 miles/trip for hydromulching trucks; 50 miles/trip for finished goods delivery trucks (VC County line to site); and 80 miles for concrete pump trucks (to account for engine use while pumping).
- 4) Unpaved distance per trip determined based on type of trip/use of vehicle, where the detailed assumptions are provided with the schedule and equipment data.

Offroad Equipment Emission Calculation Assumptions

- 1) CARB OFFROAD model emission factors in Ventura County are used to estimate ROG, NOx, and PM emissions for off-road equipment. SOx determined using sulfur content mass balance based on OFFROAD fuel use estimates.
- 2) SCAQMD CEQA website emission factors are used for CO for all offroad equipment (2016 EFs).

Fugitive Dust Emission Calculations Assumptions

- 1) Earthmoving emission factors are calculated using the recent version of USEPA AP-42 Section 11.9 for Dozing and Grading, and Section 13.2.4 for soil handling (drop emissions).
- 2) Paved road emission factors are calculated using the most current version of USEPA AP-42 Section 13.2.1 and use the following assumptions:
 - A) Silt loading is 0.06 g/m² for 5,000<ADT<10,000 of Table 13.2.1-2; B) average vehicle weight is calculated on VMT average basis.
- 3) Unpaved road emission factors are calculated using the most current version of USEPA AP-42 Section 13.2.2 and use the following assumptions:
 - A) Silt content is 7.5% for unpaved roads; B) average vehicle weight is calculated on VMT average basis.
- 4) For windblown emissions, emission factor of 0.38 tons/disturbed acres/year is used (AP-42 Section 11.9).

Construction - Schedule & Equipment Use

Option 1A

Assumptions:

1. Worker parking will require no more than 0.1 mile round trip on unpaved surface.
2. Unpaved road distances assumed consistently based on type of vehicle and use.
3. Work occurs 5 days a week, 7 am to 7 pm, excepting major holidays (average 22 days/month).
4. Equipment, truck trip, and employee estimates provided by the Ventura County Watershed Protection District.
5. 1 monitor, 1 inspector are assumed after mobilization; and 1 manager and one foreman assumed throughout.
6. No rideshare assumed for employee commuting vehicles.
7. When crew truck is specified it is assume one trip per day during entire task
8. Aspen assumed 1 on-road legal water truck every day after active construction starts and 1 fuel truck delivery daily weekdays after active construction starts throughout project.
9. The water truck would obtain water from local fire hydrant close to site.
10. Trips are round trips.

Construction - Schedule & Equipment Use

Option 1B

Assumptions:

1. Worker parking will require no more than 0.1 mile round trip on unpaved surface.
2. Unpaved road distances assumed consistently based on type of vehicle and use.
3. Work occurs 5 days a week, 7 am to 7 pm, excepting major holidays (average 22 days/month).
4. Equipment, truck trip, and employee estimates provided by the Ventura County Watershed Protection District.
5. 1 monitor, 1 inspector are assumed after mobilization; and 1 manager and one foreman assumed throughout.
6. No rideshare assumed for employee commuting vehicles.
7. When crew truck is specified it is assume one trip per day during entire task
8. Aspen assumed 1 on-road legal water truck every day after active construction starts and 1 fuel truck delivery daily weekdays after active construction starts throughout project.
9. The water truck would obtain water from local fire hydrant close to site.
10. Trips are round trips.

Construction - On-road Equipment Emissions Calculations

Option 1A

Assumptions:

1. CARB EMFAC 2014 model emission factors for South Central Coast Air Basin are used to estimate on-road emissions.
2. Assumptions on Vehicle Class and resulting emissions factors used for each vehicle type are provided below:

SCR-3 Project

Construction - Off-road Equipment Emissions Calculations

Option 1A

Assumptions:

1. CARB OFFROAD model emission factors in the South Central Coast Air Basin are used to estimate ROG, NOx, and PM emissions for off-road equipment, except for the small gasoline engine equipment. CARB OFFROAD model calculated BSCF and load factor data is used to determine SOx emissions based on 15 ppm sulfur diesel fuel.
2. 2016 SCAQMD CEQA website emission factors are used for CO for all offroad equipment.

Construction - Off-road Equipment Emissions Calculations

Option 1B

Assumptions:

- CARB OFFROAD model emission factors in the South Central Coast Air Basin are used to estimate ROG, NOx, and PM emissions for off-road equipment, except for the small gasoline engine equipment. CARB OFFROAD model calculated BSCF and load factor data is used to determine SOx emissions based on 15 ppm sulfur diesel fuel.
- 2016 SCAQMD CEQA website emission factors are used for CO for all offroad equipment.

SCR-3 Project

Construction - Off-road Equipment Emissions Calculations - Controlled Option 1A

Assumptions: OFFROAD model emission factors in the South Central Coast Air Basin are used to estimate ROG, NOx, and PM emissions for off-road equipment, except for the small gasoline engine equipment. CARB OFFROAD model calculated BSCF and load factor data is used to determine SOx emissions based on 15 ppm sulfur diesel fuel.
2. 2016 SCAQMD CEQA website emission factors are used for CO for all offroad equipment.

SCR-3 Project

Construction - Off-road Equipment Emissions Calculations - Controlled

Option 1B

Assumptions:

1. CARB OFFROAD model emission factors in the South Central Coast Air Basin are used to estimate ROG, NOx, and PM emissions for off-road equipment, except for the small gasoline engine equipment. CARB OFFROAD model calculated BSCF and load factor data is used to determine SOx emissions based on 15 ppm sulfur diesel fuel.
2. 2016 SCAQMD CEQA website emission factors are used for CO for all offroad equipment.
3. Controlled emissions assume Tier 3 equipment years from OFFROAD before any integration of Interim or Full Tier 4 for all diesel equipment over 50 hp.

Construction - Fugitive Dust Emissions

Option 1A

Assumptions:

1. Fugitive dust emissions are estimated using AP-42.
2. Equipment usage, amount of material handling, and VMT assumptions are presented under "Schedule & Equipment" and "Onroad Vehicles Emission Calculations" above.

Emission Categories

- 1) Earthmoving
- 2) Road Dust Paved/Unpaved
- 3) Disturbed Area Windblown Emissions

1) Earthmoving

Emission Types

- A) Dozing
- B) Grading
- C) Material Loading/Handling
- D) Scraper Loading and Unloading

A) Dozing (AP-42 Section 11.9 for overburden)

$$E = k \times (s)^{1.5} / (M)^{1.4} \text{ For PM10 and } k \times 5.7 \times (s)^{1.2} / (M)^{1.3} \text{ for PM2.5}$$

E = lb/hr

k = Scaling Constant (0.75 for PM10 and 0.105 for PM2.5)

s = Silt Content (assumed to be 7.5% - SCAQMD Handbook for overburden)

M = Moisture Content = 2% uncontrolled and 12% controlled

Dozers are only used in Reach 4

Emission Factor, lb/hr

B) Grading (AP-42 Section 11.9)

$$E = k \times 0.051 \times (S)^{2.0} \text{ for PM10 and } k \times 0.040 \times (S)^{2.5} \text{ for PM2.5}$$

E = lb/VMT

k = Scaling Constant (0.60 for PM10 and 0.031 for PM2.5)

S = Mean Vehicle Speed assumed to be 3 mph

Assumes VMT = 3 x hours in use

$$E = (k)(0.0032)[(U/5)^{1.3}]/[(M/2)^{1.4}]$$

E = lb/ton

k = Particle Size Constant (0.35 for PM10 and 0.053 for PM2.5)

U = average wind speed = 25 MPH worst day, 8 MPH avg daytime (engineering assumption)

M = moisture content = 2% uncontrolled and 12% controlled

Two separate drops are assumed for bulk material movement, except for scrapers

3) Disturbed Area Windblown Emissions

Assumptions

Emission Factor is 0.38 tons/disturbed acres/year of Total Suspended Particulate (AP-42 Section 11.9)

PM10 and PM2.5 fractions of TSP are 0.489 and 0.102 respectively per CEIDARS factors from SCAQMD CEQA Website

There are permanent and temporary disturbed acres that make up the total acre-years of disturbed area

Disturbed areas are controlled by watering - 61% control

Restoration of disturbed acres creates no net emission increase of permanently disturbed acres

SCR-3 Project

Construction - Fugitive Dust Emissions

Option 1B

3) Disturbed Area Windblown Emissions

Assumptions

Emission Factor is 0.38 tons/disturbed acres/year of Total Suspended Particulate (AP-42 Section 11.9)

PM10 and PM2.5 fractions of TSP are 0.489 and 0.102 respectively per CEIDARS factors from SCAQMD CEQA Website

There are permanent and temporary disturbed acres that make up the total acre-years of disturbed area

Disturbed areas are controlled by watering - 61% control

Restoration of disturbed acres creates no net emission increase of permanently disturbed acres

Disturbed Acres (acre)	Emissions (Lbs/day)		Total Emissions (Tons)		Reach 1-3	Uncontrolled Controlled
	PM10	PM2.5	PM10	PM2.5

4.955	2.01	0.41	0.22504	0.04609	Reach 1-3	Controlled

* Disturbance area includes piles of earth fill.

SCR-3 Project

Operation Emissions Calculations

Assumptions:

- 1) Operation is limited to an increase in annual maintenance that consists of two weeks (10 working days) of vegetation thinning and 12 inspections.
- 2) Emissions for O&M vegetation thinning are conservatively derived from the construction vegetation thinning phase data and 2016 on-road and off-road emissions factors.
- 3) Inspections are assumed to require 12 passenger size vehicle trips at 20 miles per trip.
- 4) Fugitive dust emissions are considered to be negligible during vegetation thinning and inspection. Only paved road dust emissions are included based on Alternative 1A daily construction emissions factors of 0.00047 lbs/mile for PM10 and 0.00011 lbs per mile for PM2.5.
- 5) Worst case day includes inspection and vegetation thinning.
